WELCOME TO THE 2013 BULL SALE

The 2013 sale animals reflect 56 years of concentration in our breeding program on the attributes of strong constitutions, natural thickness, fertility, reliability and excellent temperaments. The Glengowan bulls presented for the sale this year continue to reflect our focus on the traits which originally made the Angus breed great; fertility, ease of calving, mothering ability and the structure and constitution to thrive under any conditions. Since the Glengowan stud was established by the late Stuart Gordon in 1957 our breeding cows and stud sires have been selected for these characteristics with the result every Glengowan sale bull has behind him many years of considered breeding, an exceptionally consistent, strong maternal heritage as well as the depth and thickness which is the hallmark of Glengowan cattle today.

Over the last half a century Glengowan has built up a very comprehensive, genetically diverse female base with little influence from US bloodlines. We have been importing firstly, live bulls and lately, semen from New Zealand since 1981 and we have continued Stuart's approach of personally sourcing the best sires each year for Glengowan and using them in both the stud and our 3000 strong commercial herd. The sires we have used represent the finest NZ genetics available and the bulls we have invested in have proved to be very uniform with robust constitutions, moderate frames, sound structure, good heads and excellent growth. The sons of Kaharau Clarion 844 offered at this year's sale are the new generation of cattle from NZ and represent a unique opportunity to acquire these highly sought after genetics.

In terms of Breedplan, we continue to submit as much data as possible but we also continue to question the validity of the resulting EBVs in terms of meaningful, accurate information for our cattle. At Glengowan we do recognise the importance of objective measurement but we don't wish to compromise our breeding program by using high performance bulls just to boost our figures. Our choice to avoid mainstream USA genetics may have affected how we are represented on paper but this has been well and truly offset by the significant protection the Glengowan herd has from some potentially very damaging genetic defects. This is of far greater commercial relevance to both our clients and to our own business than EBVs. We firmly believe the successful performance of any breeding program is measured, not in the office but by healthy, live calves in the paddock and good prices in the sale yards.

In what has been a very tough season for all beef producers the Glengowan bulls will represent not only a great opportunity to acquire proven heritage bloodlines and some exclusive genetics but they will also provide excellent value. This year we have added brief comments on each bull and his pedigree and a video of the sale bulls is available at our website and on our Facebook page to provide extra background and information. We hope you will join us at Glengowan on sale day.

GLENGOWAN. THE GENETIC DIFFERENCE

SALE INFORMATION

SALE LOCATION & INSPECTION TIMES

The Glengowan Angus sale will be held at Glengowan, Moorilda on Thursday 19 September 2013. The sale complex is undercover and is located on the Barry- Newbridge Road, 15 km from Blayney. Cattle may be inspected on sale day from 10.00am-12.30pm. Selling will commence at 1pm. A supplementary sheet of weights and information will be available on sale day.

IDENTIFICATION

Bulls have NLIS tags, lot number and were freeze branded by Alison McIntosh of AJM Livestock Solutions. The Glengowan PIC is ND111541. All sale bulls other than Lot 7 are Herd Book Registered (HBR) with the Angus Society of Australia.

SAFETY RULES & RECOMMENDATIONS

We are confident all the bulls offered for sale are quiet and of sound temperament, however sale day brings a completely new set of conditions and the bulls will be subjected to unusual levels of noise and pressure with many people invading their space. Even the quietest bull is still an unpredictable animal who can misbehave. **Visitors enter the pens and sale complex at their own risk. Children are NOT permitted to enter pens under any circumstances** and must be supervised by a parent at all times on sale day.

BUYER REGISTRATION

A buyer registration system will apply. Please register with the selling agent well before the auction.

CATERING

Complimentary morning tea, afternoon tea and a BBQ lunch will be available at the sale complex.

PHONE BIDDING

Please make arrangements with the agents to arrange phone bidding prior to the sale as there is limited mobile phone coverage in our area.

SALE CONDITIONS

All lots will be sold subject to the usual conditions governing auction sales which will be displayed on the day. The auction price is **exclusive** of GST.

REBATE

A rebate of 3% is offered to outside agents introducing buyers prior to the sale in writing and settling on their behalf within 7 days.

HEALTH AND FEEDING

The Glengowan herd is consistently monitored for general health and temperament. Any animals not meeting our standards are removed from the herd. An intensive drenching and vaccination program is used at Glengowan and care and health of the animals is a top priority. All sale bulls have been drenched and vaccinated with 7 in 1 prior to the sale. The bulls were examined by vets from the Blayney Veterinary Hospital in August 2013. They were assessed for general soundness including assessment and palpitation of their sexual anatomy and were semen tested. All sale bulls were structurally assessed and scanned by Liam Cardile on 10 July 2013. All have blood tested negative for pestivirus.

The bulls have been grazed on pasture and oats and have also received some supplementary feeding during the coldest months only. No bull has had its feet trimmed.

NH, AM, CA and DD (Developmental Duplication eg extra limbs) are recessive genetic defects. All of the identified genetic diseases cause abnormal calves and/or infertility. Tested Carriers of the genes are identified by a C after the initials. DD is potentially the most damaging defect yet identified as affected calves more often die an early embryonic death meaning the defect could be much more widespread than evidenced by deformed, live births. This is even more likely as one of the confirmed carrier bulls is the heavily used B/R New Design 036. Our objective is to ensure the Glengowan herd is free of all suspect percentages for all identified defects and we were close to achieving this until the DD percentages were published two days before this catalogue went to print. Some Glengowan bulls now have low percentages attached but most are pedigree free of all defects and as there have never been any abnormal births or fertility issues within our herd we expect DNA from these bulls will confirm their free status.

FREE DELIVERY

Glengowan Angus will provide free delivery within 200 kms of Glengowan and also to Dubbo, Cowra and Lithgow. Delivery times will be negotiated with buyers.

PHOTOGRAPHS

A selection of sale bulls were photographed by Kim Woods, Outcross Media six weeks prior to the sale.

YOUR NEW BULL

Immediately after the sale, please fill out the buyers instruction sheet which includes delivery instructions.

The vendors will register ownership transfers with the Angus Society of Australia if details are provided to us. Please advise transfer details including your membership name and herd identity number. Non-members are requested to provide the name and address to which the animals are to be transferred.

All bulls sell with 100% semen rights to the purchaser. Glengowan reserves the right to collect up to 200 straws of any sale animal for use within our herd. Collection will be at the vendor's expense by arrangement with the purchaser.

Your bull is ready, willing and able to go to work and is familiar with people on foot, vehicles and motorbikes. He will easily adapt to most other farm vehicles and animals if they are introduced slowly. When you take your new bull home remember he is used to the security of a large mob and will find being alone a new experience which he may take time to settle into. Please do not put him with older bulls. If you can't put your bull in a new mob straight away try and have a few steers or pregnant cows in the yards as companions.

GUARANTEE

To the best of our knowledge all bulls are in sound working order at the time of the sale and each has passed a pestivirus test, vet examination and semen test.

Glengowan bulls are guaranteed for one year from the date of sale for structural soundness, fertility and capability of service.

If any of these circumstances occur Glengowan Angus will replace the bull with a satisfactory substitute if available or issue a credit equal to the purchase price (less the salvage value) which can be used at later Glengowan sales.

The guarantee covers only the purchase value of the bull and does not apply if the bull is injured, treated negligently or contracts an illness after leaving Glengowan. A veterinary certificate must be supplied by the purchaser stating no injury or illness has been suffered by the bull. Any complaint must be lodged within the warranty period of twelve months of the sale. This guarantee is in addition to the usual terms and conditions governing auction sales.

Please bring this catalogue to the sale.

DIRECTIONS

FROM BLAYNEY - Take the **Newbridge Road** at the Post Office. Keep right for 14km (don't go left). You will pass two turn offs to Newbridge before you come to a small sign '**Moorilda**'. Proceed about 500 metres, turn right towards Barry and Glengowan is first on your left. The nearest airports are Orange and Bathurst, both approximately 45 minutes away. Please contact us or the agents if you require assistance with travel or accommodation.

There are three motels in Blayney:

The Blayney Central Motel	Tel: 6368 3355
The Blayney Goldfields Motel	Tel: 6368 2000
The Leumeah Motel	Tel: 6368 2755

* based on EBVs from the August 2013 Angus BREEDPLAN analysis.

For a detailed description of Angus Group Breedplan EBVs please refer to www.angusaustralia.com.au

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

CE % Direct = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

CE % Daughters = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on AI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate

of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Days to Calving EBV (days) indicates the fertility of the daughters of the sire. It is the time interval between the day when the female is first exposed to a bull in a paddock mating to the day when she subsequently calves. A negative EBV for days to calving indicates a shorter interval from bull-in date to calving and therefore higher fertility.

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13-rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are more favourable.

Kaharau Clarion was purchased by Mr John Bayly of Cricklewood stud for NZ \$47000 in 2010. Clarion is a very powerful sire with exceptional meat and muscle combined with excellent structure and temperament. He has frame and outlook with excellent feet and legs. Clarion's progeny were highly sought after in the 2013 NZ sales with sons selling up to NZ \$60,000. The bulls by Clarion in the Glengowan sale are the first of this outstanding sire to be offered in Australia. **10 sons sell.**

Banquet Nuttella T08

Banquet Nuttella was awarded senior champion and purchased by Stuart for \$14000 at the Wodonga Expo in 1990. A large price at the time, Stuart described Nuttella as a bull with a ton of depth and plenty of meat with a good outlook. Nuttella has left some sturdy bulls and some lovely soft females so we returned to him this year on the strength of his progeny. **5 sons sell.**

NOTICES FOR PURCHASERS

DISCLAIMER

The owners, employers and representatives of Glengowan Angus accept no liability for any accidents that may occur. Although this is a rare occurrence all persons attending the property do so at their own risk.

All reasonable care has been taken by the vendors to ensure the information in the catalogue is correct at the time of printing. However the vendors or the agents make no other representations about the accuracy, reliability or completeness of any of the information provided in this catalogue.

INSURANCE

We recommend all bulls are insured by the purchaser as the bull is their responsibility on the fall of the hammer. Immediate cover will be available for your purchases after the sale.

PRIVACY INFORMATION

The animals included in this catalogue are registered with Angus Australia. Purchasers are encouraged to accept the transfer of the registration of any animals purchased. In order for the transfer to proceed, vendors will need to provide certain personal information about the purchasers to Angus Australia. This information will be stored on the Angus Australia database and may be disclosed on the Angus Australia website. If a purchaser does not wish for their personal information to be collected and disclosed by Angus Australia they must complete the form below and forward it to Angus Australia. If the completed form is not received by Angus Australia the purchaser will be taken to have consented to the collection and disclosure of that information.

BUYER'S OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO THE ANGUS SOCIETY OF AUSTRALIA

If you do not complete this form, you will be taken to have consented to the Angus Society of Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its databases and disclosing that information to its members on its website, if the buyer is a member of the Society.

I, the buyer of animals with the following registration numbers

..... from Society member
.....(name) do not consent to the Angus Society of Australia using my name, address and phone number for the purpose of effecting a change of registration of the following animal(s) that I have purchased, maintaining its databases and disclosing that information to its members on its website.

Signature: Date:

Please forward this completed consent form to the Angus Society of Australia, Locked Bag 11, Armidale NSW 2350. Contact the Angus Society of Australia on 02 6772 3011 or email office@angusaustralia.com.au if you have any queries.
